Habitats Assessment
Veolia ES Hampshire
Eastleigh MRF

This review of the Environmental Risk Assessment in relation to the protected habitats with prescribed distances of the Eastleigh MRF is undertaken to support the new bespoke permit application.

Habitats:

- The habitats that have been considered in this review include:
- River Itchen SSSI, SAC
- The Stamford Meadow LWS
- Protected Species including Atlantic Salmon, Brown/Sea Trout, Brook Lamprey, Bullhead Cottus, European Eel, River Lamprey, Sea Lamprey, Southern Damselfly
- Deciduous Woodland Protected Habitat

Summary of Proposals:

This application seeks approval for a new bespoke MRF with an annual through put of 135,000 tonnes.

Key Considerations:

- Only non-hazardous wastes are accepted, no liquids, sludges or powders.
- Waste inputs do not contain a significant dust fraction.
- Similar MRFsoperated by Veolia within Hampshire demonstrate operations are without significant emissions.
- Fire Prevention Plan and Dust Management Plans are in place.
- A pest control contract is in place.
- All waste activities conducted on sealed drainage.
- ISO 140001 accredited management system in place.
- HRA screening is included in this assessment and shows the proposed mitigation measures at the site to be effective in protecting these identifed habitats.
