Good morning Sue,

My apologies for not getting back to you sooner. I have been out of the office on sites since my return from holiday. Please see attached the drainage plan that I hope is a little clearer. (page 6) of the drawing pack. The main container tipping area and the western area of the site drain to foul via channel drains. The rest of the site (car parking and vehicle movement area) including the eastern storage area drains to the surface swale. This is the area that the high voltage lines run directly under the surface. The waste types stored in this area are marked on the attached plan and are all in sealed containers.

Kind regards,
Mat

An aspect will be about the area with the high voltage cable, which the operator has suggested is the reason that sealed drainage can't be installed. I want to check with you whether the Operator perceives this section is the only area without sealed drainage; the maps do not make it clear. The emissions plan depicts this area as light grey in contrast to rest of site; however, there is no key to explain the colours. It appears the only waste stored in the east part is metals (in an ISO container).

Subject: COPY as PDF_Re: Request for Information/ clarity by close 28/5/25 - EPR/DB3902GK/V002: Havant Household Waste Recycling Centre

Good morning Sue,

Apologies again for the delay.

Please find attached a drainage plan for the site that shows the point of runoff leaving the site to the drainage swale. I have also included an updated emission point plan showing the point of leaving the site. An have revised the ERA for clarity.

To confirm, part of the site does drain to foul (the line situated behind the main waste container storage area) it is the remaining area of the site that cannot be connected due to the low level high voltage line running beneath the site. The grid reference for where the runoff from the western and northern parts of the site join the ditch leading to the swale is SU 70484 05892. There is a further runoff point from the eastern side which joins the ditch just before the swale leaving the site which is SU 70560 05872.

In terms of the waste list matching the original inputs this has been mirrored to meet the same wastes listed in SR2022 no6 of which the site currently operates under (the combination of previous SRules 2008 no12, no13, 2015 no19, no20). The only addition was 170504 soil & stones which is to reflect correctly catorgorised DIY inputs. Are you happy for me to leave this code in or would you rather me remove it?

Kind regards,

Mat

>
> *Reason: There are some in the list provided which are additions to the origin standard rules permit, but this hasn't been declared in the Non-Technical summary as a requested change. There is no indication in the risk assessment*

of these potential changes.

As the proposal involves a Water Quality (WQ) discharge activity I will be liaising with the WQ Team. I am aware they would require clarity on discharge points and typical volumes.

May I take this opportunity to advise that it is likely additional fees would be required in due course.

Good morning Sue,

Thank you for your email and voicemail. My apologies for not getting back to you sooner I was on leave on Friday. I can confirm the application details are still correct as submitted and the changes are all still required. The Company Secretary for Veolia ES Hampshire is Celia Gough and the registered address is 210 Pentonville Road,

London, N1 9JY

Kind regards,
Mat

    - to vary the existing SR2008 No 13, 75kte (non-hazardous and hazardous household waste amenity site) to a bespoke HWRC permit;
    - reduce throughput to 50kte per annum.
    - allow potentially contaminated surface water run-off from the site operations into a swale alongside the site.
    - no additional waste codes to be accepted.

- all contact details are still correct. A main correspondence address for the Director/ Company Secretary at the Registered Office will be needed.
