Subject:	[Mat to reply] Request for further information - EPR/DB3902GK/V002: Havant Household Waste Recycling Centre
Date:	08 August 2025 16:50:00

Hello Mathew,

Further to my voicemail today I'm writing to request further information/ detail please.

As mentioned, at the moment we're not able to progress the application because we cannot see where the drain points are on the extra drainage plans you sent. We can see brown and blue lines showing the sewers but we need to be able see clearly the drains/ point where runoff enters sewer and how this relates to the position of all the wastes across the site.

If it is in the documents you sent could you please help direct me to where they are shown; I'm happy to have a call by MST Teams to share screens.

What we are trying to ascertain is where the SR2008 No 13 (now SR2022 No6) Technique 2 non-compliance was, which we understand triggered Veolia to apply for variation to add a WDA. ("**Technique 2** All waste shall be stored, treated and handled on an impermeable surface with a sealed drainage system.")

We would like to understand :

- Are there drain points across front of bays in central compound i.e. between the row of containers and the wider yard?
- What is the drainage and where are the drain points in the area on west for high risk for oils etc?
- What is the drainage and where are the drain points in area on east section, which appears to be the only area with a red high voltage line, predominantly used for reuse (i.e. non-waste)?

Could you please advise me whether you have information on the drain points foul and surface across the whole permitted area?

I'm sorry, but if this is not readily available we may need to return application, as we haven't information to help us decide where the drainage problem is which would affect the fees required.
