Schedule 1 Activity: 6.8Part A(1)(iii)(aa)

The maximum factory production capacity is 110 tonnes per day. This is approximated based on the peak production capacity of 102 tonnes per day (from week 2 of 2026) (see 'BMB 3.13 Week 2 Production Weight 2026').

The site is not able to exceed the production capacity of 110 tonnes per day, as this is linked to the amount of sauce on site; a greater amount of sauce on site cannot be used due to the physical size of the factory.

Schedule 1 Activity: 5.4 Part A (1)(a)(ii)

The Effluent Treatment Plant (ETP) is designed to treat 700m3 per day, but at a maximum it can treat 850m3 per day. On average, the ETP treats 770m3 per day.

The maximum discharge volume is 750m3 per day.
